In 2017, we collected 6,763 pre Adult F/V Screeners, but only 61% of that was collected in post surveys (4,139), and then only 44% of post surveys could be matched to a pre survey, which means that matched pair sample was 1,829 (27%), which is not a great representation of all the amazing work that we do!

Tip*s*

Thank you!

This institution is an equal opportunity provider.
